EarthWorks
FALL APPLICATION

Replenish 8-2-2 applied in November, picture taken the following March

Roots don't grow w/o bioactive Ca and that's in ample supply in every EarthWorks granular! Help the plant drive carbohydrates and energy growing deeper, denser roots!

"In the past I had applied synthetic fertilizers in the spring but got too much growth and we couldn't up. The fall application of Replenish allowed the plants to get early color in the spring, built better rooting and didn't push growth. We are able to keep up with mowing and the course played better. The plants and soil have reserves to make it through the heat of the summer."

~Ryan O'Connor, Watchung Valley CC

Ryan uses Replenish 5-4-5 on greens, tees and fairways and 8-2-2 in the rough. Many long time EarthWorks clients report that Replenish fertilizers are the only granular applications that they make and have shown to help them reduce overall inputs, saving money, time and water.

Minimize inputs, sustain growth… that is #BiologicalSoilMgmt.
