

FULLER BLOOMS → DENSER ROOTING → ACTIVE BIOLOGY....
That's #BiologicalSoilMgmt

FLOWER PROGRAM

*"Looking at the Before & After I know it's hard to believe there's only 5 days between pics.
 Needless to say EarthWorks became the backbone of our Landscape Program."*

~Stan Rutkowski, J & S Lawnmen

These begonias were planted with our **Myco-Replenish 3-3-3** in the hole with the root mass, not much product, but enough to spread it around the hole to get as much root contact as possible. Lastly they were irrigated, drenched with Sea3 at a 2.5% solution, so thats 2.5 gallons of Sea3 in 100 gallons of water. Applied over the plants and drenched into the soil.

It was truly that simple. The customer continued to use the Sea3 drench on a consistent basis throughout the season, about twice a month. That's
#BiologicalSoilManagement

Myco-Replenish - At Planting
Sea3 - 1-5 gal./100 gal. of water
