Foliars+ 555 Foliar Program

APPLICATION RATES:

Trilogy 1-5-5
5oz/1000

Protein Plus 14-0-5
5oz/1000

CalVantage 6-0-0 8Ca
5oz/1000

Applied every 2 weeks - this is a simple (1 case of each on greens) and cost effective program that has proven results.
Add 3-5 oz/1000 of BioVantage when temperatures consistently reach 75°F.

This application gives roughly 0.1 lbs. of N along with ample amounts of P, K, and Ca. The 555 foliar program includes a host of micronutrients and all of the carbon cofactors needed to stimulate microbial populations, which helps with the mobility of these nutrients and ones tied up in the soil. Based on soil tests, substitutions or additions with other **EarthWorks Foliars+ Liquids** like MagVantage can also be used to achieve great results.

We know you've got choices when it comes to Foliar Programs, but we're so confident in our products that we back them up with the following guarantee: Commit to our EarthWorks carbon based Foliars + Foliar Program powered by BioCharge for 90 days on 9 holes and compare it to your current program. We know you'll see the difference in turf performance and the applications will last 2 weeks without 'running out of gas.'

Cost Effective, Easy to Use, Proven Results.

Foliars+ 555 Foliar Program

Introducing
Eco-Adaptive
TECHNOLOGY™

Trilogy 0-5-5 w/traces

A total bio-stimulant and complete fertilizer in one package

Trilogy can provide your plants with complete fertility and microbial activation in one easy to use product.

Trilogy is a complete trace package.

Trilogy provides the plant with phosphorous and potassium and is powered by BioCharge.

Protein Plus 14-0-5

Provides nitrogen and all the cofactors for protein production

Protein Plus quickly assimilates in the plant to produce deep green long lasting color.

Protein Plus was formulated to quickly build photosynthetic pigments in the plant.

Protein Plus helps reduce thatch.

Calvantage

Available calcium is the backbone of all plant material

CalVantage combines multiple forms of calcium and boron with the BioCharge carbon base creating a product with significantly improved calcium uptake potential.

CalVantage has the ability to flush both sodium and bicarbonates from the rootzone.

CalVantage is powered by BioCharge which significantly helps this large molecule move into the plant.
