Foliars+ 555 Soil Program

APPLICATION RATES:

Kick
5oz/1000

KVantage
5oz/1000

BioVantage
5oz/1000

Applied every 2 weeks - this is a simple (1 case of each on greens) and cost effective program that has proven results.

Every turf related soil is affected by the build-up of sodium and/or bicarbonates that leads to sodium wilt stress and/or localized dry spots. A biweekly rinse in of the EarthWorks 555 Soil Program can help keep both sodium and bicarbonates at bay and away from your plants.

The EarthWorks 555 Soil Program is best used every two weeks as a soil rinse in program using at least two gallons of water per 1000 square feet of soil. It does not need or want a deep flush but is an ideal rinse in used after a deep flushing.

We know you've got choices when it comes to Soil Programs, but we're so confident in our products that we back them up with the following guarantee: Commit to our EarthWorks carbon based Foliars + Soil Program powered by BioCharge for 90 days on 9 holes and compare it to your current program.

Cost Effective, Easy to Use, Proven Results.

Foliars+ 555 Soil Program

Introducing
Eco-Adaptive
TECHNOLOGY™

Kick

Open up tight soils and give your soil biology a Kick

Kick is a powerful proprietary humic and fulvic acid package approved by the Humic Products Trade Association (HPTA).

Kick is the backbone of the EarthWorks Kick Rinse In Program.

Kick is the Ultimate Soil Conditioner and can help build strong deep roots.

KVantage

Available Potassium using Eco-Adaptive Technology

KVantage is the first EarthWorks product to be formulated with Eco-Adaptive Technology.

KVantage can fight off sodium uptake reducing the plant's need for water and slowing down sodium induced wilt stress.

KVantage is powered by BioCharge which significantly helps the multiple forms of potassium to move into the plant ahead of sodium.

BioVantage

Jump start your soil's ability to produce healthy, vigorous plants

BioVantage is part of a new generation of EarthWorks products that incorporate biological inoculants.

BioVantage combines this powerful plant and soil stimulant with a multi-strain package of Plant Growth Promoting Rhizobacteria.

BioVantage will improve the soils ability to digest organic matter.
