

EarthWorks HYDROSEEDING

Reduce Inputs with Certified Organic Fertilizers

Quickly establish turf → Activate soil biology → Build topsoil and humus
Allow the soil to manage water → Reduce irrigation need → Soak-up rainwater runoff

"The results are extraordinary. I spread the word to everyone I can, my farmer friends, other landscapers. When we started using 3-4-3 we did a side-by-side comparison w/ the 14-14-14 we had been using. Not only did the turf establish weeks faster, the stand was far denser, and greener with the EarthWorks compared to the 14-14-14. It's not even in the same ballpark!"

~Chris from Eric's Landscaping

Replenish 3-4-3 and Myco Replenish 3-3-3 are OMRI certified organic fertilizers.

Chris uses 10 lbs. per thousand sq. ft. of 3-4-3. He puts two bags in the hydroseeder tank that covers 10,000 sq. ft. He was using three times as much NPK from the 14-14-14 product. The difference is the carbon, its sustainable, holds moisture at the point of seed contact and reduces costs. That's
#BiologicalSoilMgmt.

Get tremendous return on investment with EarthWorks through your hydroseeder!
