EarthWorks OVERSEEDING

AT SEED DROP

Myco Replenish 3-3-3

10-15 lbs/1000 sq ft for Greens, Tees & Fairway establishment.

Myco Replenish is a mycorrhiza inoculated carbon based fertilizer. Mycorrhiza is extremely effective at taking young seedling roots deep into the ground and can help the plant find needed phosphorous.

This is especially important where turf managers have struggled to establish new seedlings on slopes or high salt locations.

GROW IN & MAINTENANCE

Sea3

1 gal/acre in every tank, added to your Urea and FeSO4 spray.

You will get more out of your foliar program once the ryegrass is up and going. Customers have reported longer intervals between sprays and better turf color from the humic acids, fish and kelp meal, plus worm tea and 90 trace nutrients.

HUMIC PRODUCTS TRADE ASSOCIATION ESTABLISHED 2010

Both programs introduce much needed **soluble carbon** to seedlings and soils that are taxed by sodium and bicarbonate issues. Soluble carbon also helps to **hold water**, which can **save money** on irrigation cost. This delivers an **ROI** not found with salt fertilizer programs.
