

EarthWorks Carbon Based Fertility Sod, Seed, and Sprig Program

Mycorrhiza increases the surface absorbing area of roots by 1000 times

Program: 10-20 lbs of Myco Replenish - 2 applications of Sea 3 @ 2 gallons per acre

The EarthWorks Sod, Seed, and Sprig program can ensure fast establishment and/or recovery from damage to keep those areas in play all season long. By applying Myco Replenish under sod or along with seed and following up with applications of Sea 3, your turf will build strong roots quickly.

Myco Replenish 3-3-3 is a powerful mycorrhiza inoculant and carbon based fertilizer. The mycorrhiza will take hold of turf roots and run them deep into the soil helping roots find water and nutrients. It is the perfect "starter" fertilizer and will help the plant pull phosphorous into the turf ensuring quick establishment and long lasting success.

Sea 3 is the perfect accompaniment to the Myco Replenish. It will supply the turf with all the foliar nutrients it needs to make it through cold wet springs. Additionally, Sea 3 gets micro-organisms working at mobilizing nutrients and digesting ligneous thatch into usable humus. With over 70 minerals and 25 amino acids in the formula Sea 3 can keep your playing surfaces in play.
